

Barrel Clamps

Barrel Clamp - A Barrel Clamp is a hydraulic or mechanical attachment for a lift truck. It could be utilized so as to grip the object you need to transport using the forklift and is usually used for handling paper rolls, barrels, and kegs. Some types of barrel clamp accessories also have a rotate function. For example, the rotate function permits the person operating the forklift to be able to slot in a vertically stored paper inside the horizontal intake of a printing press.
